

# High Density Multi-Level Storage

## Expand Warehouse Storage Capacity

Mezzanine and Catwalk systems, or additional tiers of shelves and additional floors space above shelving, is a cost effective alternative to expansion while improving efficiency and accessibility. By increasing vertically, leasing additional space can be averted and better flow can be designed into existing premises. Multi-level systems are engineered to the highest standards and are suitable for seismic installations.

## Shelf Supported Catwalk Systems

Catwalks are tiers of shelves with aisles for accessibility and can be built in two or three stories with a variety of material handling solutions for improved ergonomics and workflow. Each system is custom engineered to specific space, height, functional, and load requirements using standardized components. The modular nature of the product allows for adaptability to any environment and space and to the changing needs of industry and business.

## Mezzanine Systems

E-Z-Rect Mezzanine system offers unparalleled versatility in creating additional floor space for expanded production, offices, or supervisory space. Built on top of our trademark multipurpose shelving or free standing, it is engineered for seismic or specific regional requirements. By building on a modular system, the mezzanine can be adjusted for different applications or reassembled for relocation.

- Additional desk or office space
- Gallery or production supervisory location
- Cafeteria or break area
- Machinery storage space

## E-Z-Rect Mezzanine & Catwalk System Features

Mezzanine and catwalk systems substantially increase usable storage space. They can be an excellent alternative to warehouse racking systems, at a significant cost savings. Our systems feature:

- Unobstructed access to second or third levels for additional storage and work space
- Professionally designed and engineered system
- Strength, rigidity and durability of E-Z-Rect Type 1 Shelving
- High quality decking and grating with pre-formed connectors for easy assembly
- Easy to relocate system
- Safety factor of 1.66 to 1 conforms to AISI standards

## Applications of Multi-Level Shelving

- Manufacturing facilities
- Distribution centers
- Production plants
- Warehouses
- Large Scale Document Storage
