# GalvaDeck galvanized wire decking.

## Standard Waterfall

This wire deck is designed with a waterfall to hold the wire deck in place.

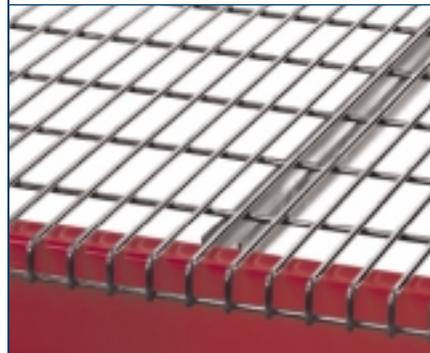

## 2" x 2" Mesh Pattern

This sturdy 2" x 2" mesh pattern provides extra support for heavy loads.

## Inside Waterfall

This design is intended for use when the front or rear beams must be open for bar coding. These racks are ideal for use in tight areas. (Holes are pre-drilled for teks screws upon request.)

## 1" x 4" Mesh Pattern

This design features a 1" x 4" mesh pattern and is ideal for use with small products and increased load capacities.

## Universal Flange

Our universal flange is specially designed for use on either structural C channel beams, box beams, or step beams.

**J&L Wire Cloth wire decks are designed and manufactured in accordance with ANSI MH26.2.**

### Flue Space Divider

Our flue space dividers are designed to be used when loading products from both sides. These dividers feature a flue area for water flow in case of fire and have an open area for sprinkler systems.

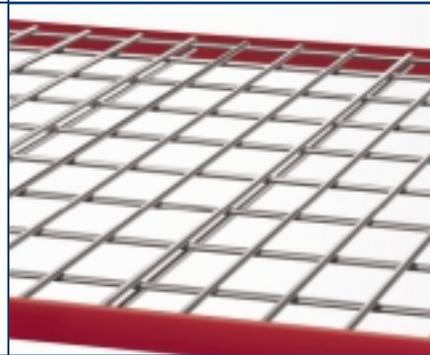

### Clip Dividers

Creating sections within your bays and dividing products has never been easier with J&L Wire Cloth's sturdy clip dividers.

### Hanging Dividers

These dividers are designed to be made for either front to back or left to right applications. The design allows for quick and easy installation.

### Bulk Storage (Single Rivet Shelving)

Our lightweight storage decks are designed to fit on 5/8" step beams. Underside wires are provided for increased capacity.

### Bulk Storage (Double Rivet Shelving)

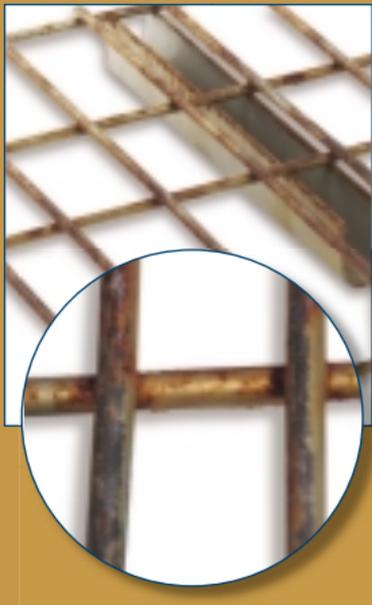

J&L Wire Cloth wire decks for bulk storage are designed with waterfalls in the front and rear for safety when hand loading. These waterfalls prevent clothing from catching and injury to hands.

## Why GalvaDeck is the solution for you

We take great pride in the design and manufacture of our wire rack decking. GalvaDeck retains its appearance and surface integrity. It is strong, safe and easy to install, and the reflective quality of our galvanized finish will brighten your warehouse. We carry a large inventory in stock for immediate delivery.

## The competition doesn't measure up

Compare our rack decking with ordinary powder coated decking and it becomes clear why GalvaDeck is the better investment. GalvaDeck is incredibly durable. On the other hand, powder coated decking chips, scratches and corrodes with time, compromising the structural integrity of the decking, causing an unsightly appearance and increased friction.

## It all starts with top grade wire

Only the best quality wire passes our stringent grading process. After the wire is graded, we

apply our famous, highly reflective galvanized finish and inspect it again. At J&L Wire Cloth, we have your best interest in mind.

## Mesh Patterns and Gauges

Mesh Patterns are available in sizes: 2" x 4", 2½" x 4", 1" x 4", 2" x 2", 2" x 3", 4" x 4". Available in 2, 4, 5 and 6-gauge. Call for custom gauges and mesh patterns.

## Inverted Channels

Inverted channels are available for step and box beams to be used in clean areas. Our inverted channels will not

fill with dust, dirt, or any other debris, including water, keeping your storage area cleaner.

The J&L Wire Cloth legacy has been built on quality, service and of course, competitive pricing.
